

Suction Filter

Pi 220

up to nominal size 63

1. Features

Efficient filters for modern hydraulic systems

- Modular design principle
- Compact design
- Minimal pressure drop
- Optical/electrical/electronic differential pressure indication
- Thread connection

Quality filters, easy to service

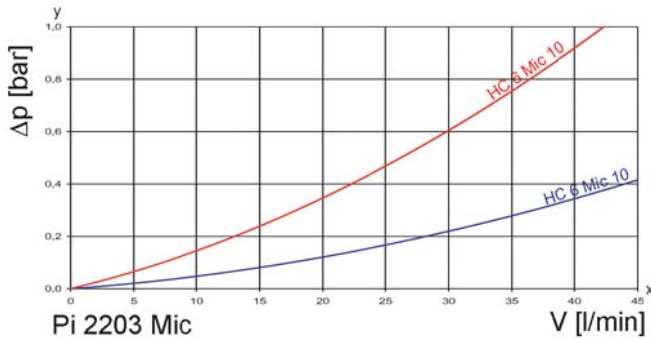

- Equipped with highly efficient Mic- oder Sm-x- filter elements
- β -valued elements per ISO 16 889
- High dirt holding capacity and differential pressure stability providing optimal element service life

Worldwide distribution

2. Flow rate/pressure drop curve complete filter

■ 190 mm²/s (25° E)
■ 33 mm²/s (4,5° E)

y = differential pressure Δp [bar]
 x = flow rate V [l/min]

3. Separation characteristics

y = beta-ratio

x = particle size [μm]

determined by multipass tests (ISO 16889)

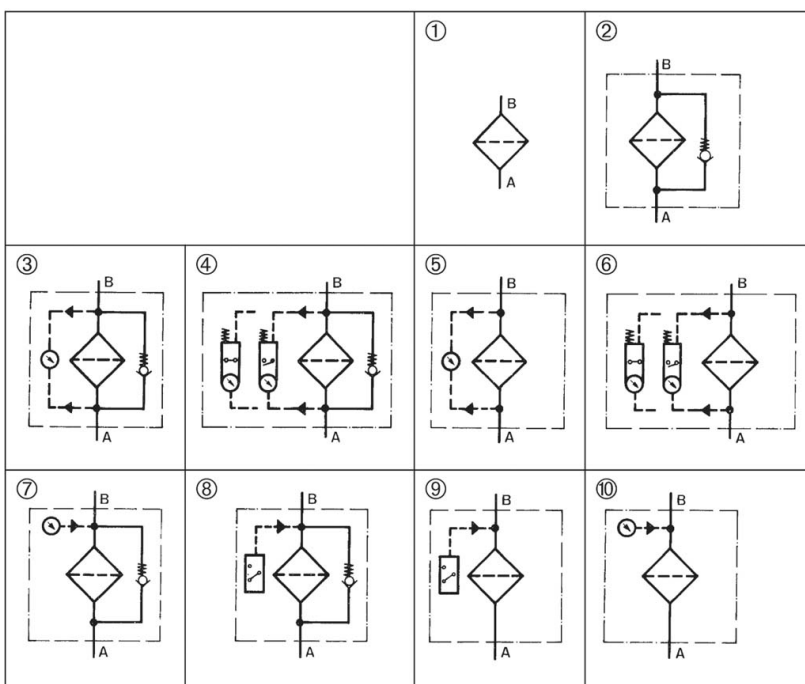

calibration according to ISO 11171 (NIST)

4. Quality assurance

MAHLE filter and filter elements are manufactured respectively, tested in accordance with the following international standards:

Norm	Designation
DIN ISO 2941	Hydraulic fluid power filter elements; verification of collapse/burst resistance
DIN ISO 2942	Hydraulic fluid power filter elements; verification of fabrication integrity
DIN ISO 2943	Hydraulic fluid power filter elements; verification of material compatibility with fluids
DIN ISO 3723	Hydraulic fluid power filter elements; method for end load test
DIN ISO 3724	Hydraulic fluid power filter elements; verification of flow fatigue characteristics
ISO 3968	Hydraulic fluid power filters; evaluation of pressure drop versus flow characteristics
ISO 10771.1	Fatigue pressure testing of metal containing envelopes in hydraulic fluid applications
ISO 16889	Hydraulic fluid power filters; multipass method for evaluation filtration performance of a filter element

5. Symbols

6. Order numbers for pressure-side installation

Example for ordering filters:

1. Housing design	2. Spin-on cartridge
V=25 l/min, bypass, electrical contamination indicator Type: Pi 2202-58 Order number: 77665649	Mic 10 Type: Pi OC 58 Order number: 77785933

8. Specifications

Design:	line mounting filter
Operating pressure:	10 bar*
Test pressure:	13 bar
Temperature range:	-10 °C to +120 °C (other temperature ranges on request)

Bypass opening pressure:	
Pressure side:	Δp 3.5 bar \pm 10%
Suction side:	Δp 0.25 bar \pm 10%
Filter head material:	GDAL
Filter bowl material:	St
Sealing material:	NBR/AL
Activating pressure of optical/ electrical differential pressure indicator:	Δp 2.2 bar \pm 0.3 bar
Indicating range vacuum meter:	-1 bar to + 1.5 bar
Pressure setting vacuum switch:	200 mbar
Type of protection (suction side):	IP 54
Electrical data of contamination indicator:	
Maximum voltage:	250 V AC/200 V DC
Maximum current on contact:	1 A
Inrush current:	70 W
Type of protection:	IP 65 when inserted and secured
Contact:	bistable
Cable connection:	M 20 x 1.5

The switching function can be changed by turning the electric upper part by 180 ° (normally closed contact or normally open contact). The state on delivery is a normally closed contact. The use of quenching circuits must be checked in the case of inductivity in the DC current circuit. The contamination indicator data sheet contains further information and additional contamination indicator versions.

Spin-on cartridges are compatible with standard mineral oils. Please consult with us if using other media.

We draw attention to the fact that all values indicated are average values which do not always occur in specific cases of application. Our products are continually being further developed. Values, dimensions and weights can change as a result of this. Our specialized department will be pleased to offer you advice.

When using our filters in areas which are to be classified according to EU Directive 94/9 EG (ATEX 95), we recommend prior discussion with us.

The standard version can be used for liquids based on mineral oil (corresponding to the fluids in Group 2 of Directive 97/23 EC article 9). Please consult with us if using other media.

Subject to technical alteration without prior notice.

* For the contamination of the housing designs as per 6.1 with medium-pressure spin-on cartridges refer to leaflet "spin-on cartridges" for dimensions and specifications. Operating pressure on request.

*with suction-side installation only.

10. Installation, operating, maintenance instructions

10.1 Filter installation

When installing the filter make sure that sufficient space is available to remove spin-on cartridge. Filter should be installed with the spin-on cartridge pointing downwards. The contamination indicator must be visible.

10.2 Connecting the electrical contamination indicator

The electrical indicator is connected via a 2-pole appliance plug according to DIN EN 175301-803 with poles marked 1 and 2. The electrical section can be inverted to change from normally open position to normally closed position or vice versa.

10.3 When must the filter element be replaced?

- Filters equipped with optical and electrical contamination indicator:
During cold starts, the indicator may give a warning signal. Depress the red button of the visual indicator once again only after operating temperature has been reached. If the red button immediately pops out again and/or the electrical signal has not switched off after reaching operating temperature, the filter element must be replaced after the end of the shift.
- Filters without contamination indicator:
The filter element should be replaced after the trial run or flushing of the system. Afterwards follow instructions of the manufacturer.
- Please always ensure that you have Original MAHLE replacement elements in stock: disposable elements (Sm-x) cannot be cleaned.

10.4 Spin-on cartridge replacement

- Stop system and relieve filter from pressure.
- Unscrew the spin-on cartridge with the aid of a belt spanner by turning same to the left
- Make sure that the order number on the spin-on cartridge corresponds with the order number of the plate.
- The seal of the screw-on cartridge should be lightly oiled.
- Screw cartridge on in accordance with the printed-on instructions.
